## Water Pitcher Filter Flushing Instructions

Filters are pre-flushed prior to shipment. We recommend you re-flush before the first use and periodically to provide optimal water flow and effectiveness.

1. Remove filters from reservoir, if applicable (fig A)
2. Screw the flushing disc onto the filter (fig B)
3. Attach flushing assembly to your sink faucet (fig C)
4. Hold in place over the faucet, slowly turn the **cold water (only)** on until a thin stream of water begins to flow from the filter (fig C)
5. Allow the water to flow for 3 minutes.
6. Turn water off, remove the flushing disc, and install filter onto the reservoir.
7. Repeat with second filter. Be sure to save the flushing assembly for future use.

**Your pitcher is now ready to use. Fill, drink and enjoy!**
