

Water Filtration Pitcher

USE & CARE INSTRUCTIONS

Congratulations on your purchase!

The Aclare Water Filtration Pitcher is the most tested, effective, efficient and economical water filtration pitcher on the market.

Key Features:

- Provides up to 200 gallons of delicious, clean filtered drinking water
- Cost-effective—replaces bottled water
- All materials FDA food grade approved and BPA-Free
- Replacement filters are easy to install

The Aclare Water Filtration Pitcher is intended for use with **chlorinated or disinfected water supply only;**

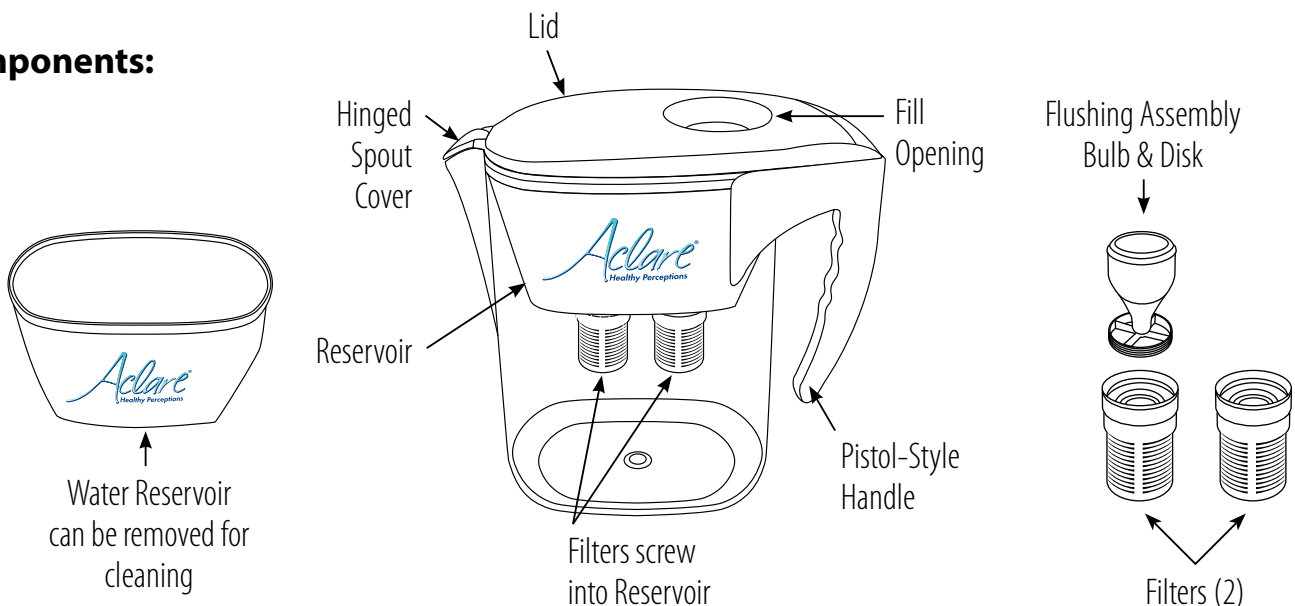

and not intended for use with water from private wells (unless water is disinfected), rivers, streams, or oceans.

The filters remove/reduce up to 99.99% of contaminants commonly found in drinking water:

- Offensive tastes, odors, chlorine, silt, sand and sediment
- Industrial and agricultural contaminants such as PCBs, THMs, detergents, pesticides, herbicides, fungicides, insecticides, pharmaceuticals, etc.
- Heavy metals such as aluminum, arsenic, asbestos, cadmium, chromium 6, copper, lead, mercury, zinc and up to 90% of fluoride
- Radon 222

NOTE: See reverse side for **Quick Start Instructions**

Components:

Water Filtration Pitcher

QUICK START INSTRUCTIONS

STEP 1—Unpack

Remove contents from box and identify all parts:

STEP 2—Prepare & assemble

Lift the lid from the carafe, exposing the reservoir, and remove the filters. Once the filters are removed, wash the carafe, reservoir and lid with mild soap and water. Then dry thoroughly. **NOTE:** DO NOT wash the filters.

STEP 3—Flush the filters

The filters are pre-flushed prior to shipment; however, we recommend you re-flush the filters before the first use. This provides optimal water flow and effectiveness.

NOTE: Refer to the **Filter Flushing Instructions** included in the box.

STEP 4—Attach Filters

Attach the filters to the reservoir by screwing clockwise until hand-tight.

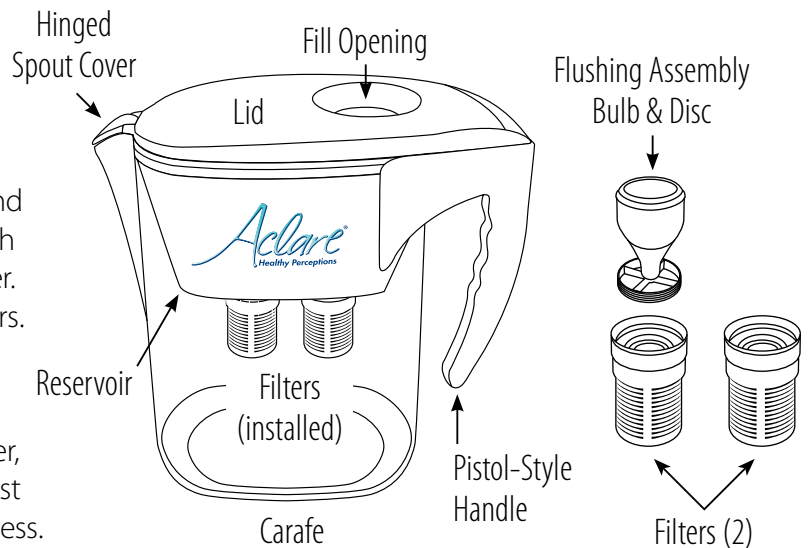

STEP 5—Assemble

Place reservoir into carafe so that Side A is facing the spout and Side B is facing the handle. Install lid.

STEP 6—Fill with tap water

Fill the reservoir with COLD chlorinated or disinfected tap water through the fill opening. Capacity is about 1½ quarts. After the water filters into the lower carafe, you can refill with another 1½ quarts of tap water since the carafe holds approximately 3 quarts of filtered water. It is okay for the purified water level to fill above the filters. Enjoy great tasting filtered water for up to 200 gallons!

Filters last for approximately six months depending upon water usage and water quality. Diminished water flow is a sign that the filters are clogging with contaminants, nearing the end of their effectiveness and will soon need replacement.

We recommend that you re-flush filters anytime you notice an issue with water flow, however, due to the many possible contaminants in water throughout the world, the reduced water flow is a prompt that the filters will soon need to be replaced.

Pitcher maintenance & storage:

It is recommended that you periodically clean the carafe, reservoir and lid with mild soapy water.

When the pitcher will not be used for an extended period of time, remove the reservoir and unscrew filters. Allow to air dry thoroughly (24 hours). When completely dry, reassemble and store until ready for use. After storage for an extended period, re-flush filters before use.
